FIELD OF THE INVENTION

[0002] The present invention relates to a display device for tool accessory containers and related products and more particularly, to an interactive display for containers and related products

BACKGROUND AND SUMMARY OF THE INVENTION

[0003] Accessory containers are commonly used throughout the construction industry. Various containers are generally used to organize small parts such as drill bits, nails, fasteners and the like. In some instances, such small parts may be sold as a complete set with the container. The present invention is directed toward providing an interactive display device for effectively displaying the multiple piece count tool accessories included in the set as well as displaying and communicating the features and benefits of the container. In this regard, the present invention provides a blister package having an opening incorporated on a first side of an accessory container and an enclosure portion incorporated on the opposite side of the container. As such, the enclosure
